Wooseok Lee

Full-Stack Engineer · AI Agent Automation

Goyang, Seoul metropolitan area, South Korea (GMT+9) · open to remote · +82-10-5059-8558 · woosuk547@naver.com · github.com/Sinabro-wooseok · Portfolio: repause.co.kr

SUMMARY

Sole engineer at Wehome, a Korean short-term rental marketplace with 8,000+ listings. I own the web, backend, AWS infrastructure and native iOS/Android apps end to end, from bookings and search to payments, settlement and support; every app change since I joined is my own. I build with AI coding agents (Claude Code, MCP) for speed, and I verify every change myself with hooks, review and production checks. Before Wehome, 8 years of building and running e-commerce and client websites, with a strong eye for UI design.

279 → 0 Airbnb-booked nights left bookable on Wehome	**40.7s → 1.1s** slowest query (review-sync job), measured before/after	**1,071** rogue GPU instances shut down within ~10 min	**1 person** web · backend · iOS · Android · infra

EXPERIENCE

Wehome

Jan 2026 – Present

Full-Stack Engineer · Head of Technology & Operations — short-term rental marketplace

- Sole owner of PHP (CodeIgniter) / JavaScript web, backend APIs, MySQL, AWS, and native iOS (Swift) and Android (Java) apps.
- **Performance:** measured and fixed the three slowest queries (review-sync job 40.7s → 1.1s, legal-page list 5.4s → 0.39s, ads dashboard 17s → 0.07s). Stopped a headless-browser crawler farm with 4 WAF rules (600 → 50 req/min).
- **Payments & settlement:** run cancellations and refunds across 5 payment gateways. Reconciled payouts against the bank API: 40 transfers (~KRW 8.76M) sent but never marked paid were closed out and the one actual double payout recovered the same day; restored the missed-settlement alert.
- **Integrations:** reverse-engineered Airbnb (GraphQL), Agoda and Channel Talk APIs from network traffic to automate calendars, bookings, payouts and guest messaging. Fixed four sync bugs, cutting Airbnb-booked nights left open on Wehome from 953 (49 listings) to 264 (8), with bookable exposure 279 → 0.
- **Mobile:** made every iOS (Swift) and Android (Java) app change since joining myself: in-app playback for home-feed stay videos (no more bounce to Instagram), smoother stay pages, Google sign-in failures fixed at the root, a price filter that matches the nightly price shown, up to 10 photos per message, unsaved-edit warnings and an in-app rating prompt after booking. Shipped iOS builds 69 → 121 and Android 88 → 150 in ~3 weeks with 8 Maestro regression flows; release notes in 8 languages.
- **AI agents & automation:** built a Claude Code harness with custom hooks and approval gates, MCP servers (Slack, browser, iOS/Android simulators, MySQL) and scheduled agents for mail triage, ads monitoring and off-platform steering detection.
- **Generative AI features:** run document review, support assist and weekly reports on AWS Bedrock with human final review. Built a listing-photo-to-video promo pipeline (image-to-video + Remotion).
- **Security & reliability:** encrypted session cookies, CSRF protection, SQL injection and authorization-bypass fixes, PKCE for app login. Sentry/CloudWatch monitoring, staging promotion and automatic recovery of lost files.

The Choomo

May 2025 – Jan 2026

Web Developer · Team Lead (team of 5) — built and ran the company website alone

- Introduced AI-assisted development (Cursor + Claude), cutting publishing and feature development time by 50%+.
- Developed PHP backend and frontend features, including real-time KakaoTalk notifications for customers.
- Rebuilt the admin UI so non-technical staff could run daily operations on their own.

Freelance Jan 2023 – Apr 2025

Web Publisher — sites and platforms across industries

- Built, redesigned and maintained client sites, adapting quickly to unfamiliar codebases. Responsive UI rebuilds, accessible semantic markup, and debugging for e-commerce and board systems.

Airpass Sep 2024 – Dec 2024

AI Data Specialist — accessibility AI (government-funded)

- Preprocessed, labeled and quality-checked gesture and atypical speech datasets for model training.

LeeAndYang Mar 2017 – Feb 2024

Web Developer · Team Lead (team of 6) — Cafe24 e-commerce store (7 years)

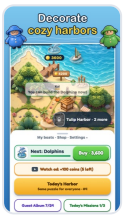

- Promoted to sole team lead after a 3-month probation; led the full 6-person team (development and operations), setting priorities and assigning work.
- Owned the online store end to end: storefront UI, promotions and product pages, PG payments, membership tiers, points and coupons. Improved the mobile checkout flow to reduce drop-off.

SELECTED WORK — DESIGN & BUILD

Dock Ferry — personal project (Little Tide Games) Oct 2026 – · App Store in review

Color-sort boat puzzle game for iOS and Android — designed, built and shipped solo with Claude Code · public TestFlight beta

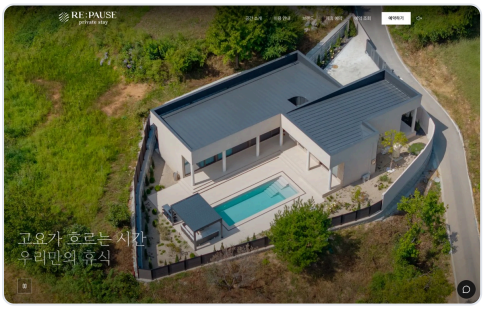

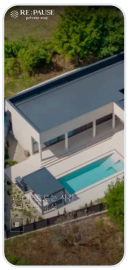

- Shipped 65 TestFlight builds in 8 days. A level generator and solver check that every level is solvable; 23 rule-level automated checks.
- Monetization: AdMob (rewarded, interstitial, banner, GDPR consent), 6 in-app purchases with recovery of unfinished purchases, ByteBrew analytics.
- 7 languages, retention loops (daily rewards, win streaks, sticker album), Python pipeline that cleans up AI-generated art. TypeScript · Capacitor · 27k lines.

Repause (repause.co.kr) — freelance, client: Krios Apr 2026 – Sep 2026 · live

Booking site for a high-end private pool villa — designed, built and deployed solo

- Owned the full UI and art direction: quiet, editorial layout, aerial hero video, motion with Framer Motion, mobile-first.
- Built booking (standard and partner), Toss Payments checkout, coupons, deposit split payment, reservation lookup and an admin dashboard.
- Next.js (App Router) · TypeScript · Tailwind CSS · shadcn/ui · Prisma · Naver Maps · Channel Talk. Deployed on Naver Cloud.

SKILLS

Backend	PHP (CodeIgniter), MySQL, REST APIs, Python (automation), Node.js, Linux
Frontend	TypeScript, JavaScript, React, Next.js, Tailwind CSS, Framer Motion, responsive UI, accessibility
Mobile	iOS (Swift), Android (Java), WebView hybrid, App Store / Play Store releases
Cloud & Ops	AWS (EC2, RDS, Bedrock, CloudWatch), Sentry, cron/batch jobs, staging and recovery
AI	Claude Code, Claude API, MCP, AWS Bedrock, Cursor, Gemma, agent design with human approval gates
Integrations	Airbnb, Agoda, Booking.com, Tujia, Channel Talk, 5 payment gateways, Google & Naver Ads APIs

EDUCATION & OTHER

Education	Sangmyung University, Computer Science (2014–2021, did not complete)
Military	Republic of Korea Army, Sergeant, honorably discharged (2014–2016)
Languages	Korean (native) · English (professional reading and writing) · Chinese (conversational)
