Summary.

Sole engineer at Wehome, a Korean short-term rental marketplace with 8,000+ listings, owning web, backend, AWS and native iOS/Android apps end to end. I build with AI coding agents (Claude Code, MCP) and verify every change myself with hooks, review and production checks. Before Wehome, 8 years building and running e-commerce and client websites.

279 → 0
Airbnb-booked nights left bookable on Wehome

40.7s → 1.1s
slowest admin query (review targets), before/after

1,071
rogue GPU instances shut down within ~10 min

43,409 → 507
PHP-writable files after tracing a web shell

Experience.

Wehome
Jan 2026 – Present · 10 mos

Full-Stack Engineer · Head of Technology & Operations — short-term rental marketplace

- **Scope:** PHP (CodeIgniter) / JavaScript web, backend APIs, MySQL, AWS, iOS (Swift) and Android (Java). Built a Claude Code harness with custom hooks, MCP servers and human approval gates for delete, send and pay.
- **Integrations:** reverse-engineered Airbnb (GraphQL), Agoda and Channel Talk APIs to automate calendars, bookings and guest messaging. Fixed four sync bugs: **Airbnb-booked nights left bookable on Wehome 279 → 0** (mismatched nights 953 → 264).
- **Payments & settlement:** refunds across 5 gateways. Reconciled payouts with the bank API: found **40 transfers (~KRW 8.76M)** sent but never marked paid, closed out 39 and recovered the one paid twice the same day.
- **Performance & security:** fixed the three slowest queries (**40.7s → 1.1s**, 5.4s → 0.39s, 17s → 0.07s). Contained a cloud-account compromise **within ~10 min** of detection (1,071 GPU instances shut down); cut PHP-writable files 43,409 → 507 after tracing a web shell. WAF rules stopped a crawler farm (600 → 50 req/min).
- **Mobile:** every iOS and Android change since joining is mine: in-app playback for feed videos, smoother stay pages, Google sign-in fixed at the root, 10 photos per message. **Shipped iOS builds 69 → 121 and Android 88 → 150 in ~3 weeks** with 8 Maestro regression flows.
- **Generative AI & automation:** support chatbot on AWS Bedrock with read-only tools and PII masking, **55% resolved** and 22% handed to agents (first week of Oct); document review and weekly reports with human final review; listing-photo-to-video promo pipeline; scheduled agents for mail triage and ads monitoring.

The Choomo
May 2025 – Jan 2026

Web Developer · Team Lead (team of 5) — built and ran the company website alone

- Introduced AI-assisted development (Cursor + Claude), cutting publishing and feature development time by 50%+.
- Developed PHP backend and frontend features, including real-time KakaoTalk notifications for customers.
- Rebuilt the admin UI so non-technical staff could run daily operations on their own.

Freelance · Web Publisher — client sites across industries, responsive and accessible UI — Jan 2023 – Apr 2025 · concurrent

Airpass · AI Data Specialist — labeled and QA'd accessibility AI datasets — Sep 2024 – Dec 2024 · concurrent

LeeAndYang
Mar 2017 – Feb 2024

Web Developer · Team Lead (team of 6) — Cafe24 e-commerce store (7 years)

- Promoted to sole team lead after a 3-month probation; led the full 6-person team (development and operations), setting priorities and assigning work.
- Owned the online store end to end: storefront UI, promotions and product pages, PG payments, membership tiers, points and coupons. Improved the mobile checkout flow to reduce drop-off.

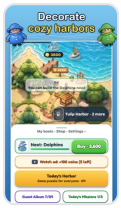

Selected Work — Design & Build.

Dock Ferry — personal project (Little Tide Games)

Oct 2026 – Present · in review

Color-sort boat puzzle game for iOS and Android — designed, built and shipped solo with Claude Code · public TestFlight beta

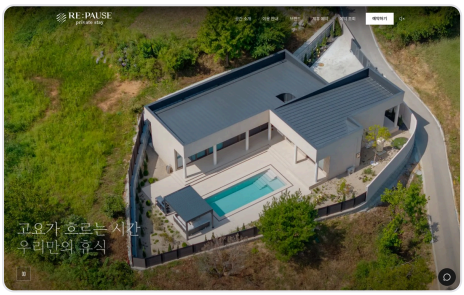

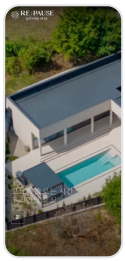

- Shipped 65 TestFlight builds in 8 days. A level generator and solver check that every level is solvable; 23 rule-level automated checks.
- Monetization: AdMob (rewarded, interstitial, banner, GDPR consent), 6 in-app purchases with recovery of unfinished purchases, ByteBrew analytics.
- 7 languages, retention loops (daily rewards, win streaks, sticker album), Python pipeline that cleans up AI-generated art. TypeScript · Capacitor · 27k lines.

Repause (repause.co.kr) — freelance, client: Krios

Apr 2026 – Sep 2026 · live

Booking site for a high-end private pool villa — designed, built and deployed solo

- Owned the full UI and art direction: quiet, editorial layout, aerial hero video, motion with Framer Motion, mobile-first.
- Built booking (standard and partner), Toss Payments checkout, coupons, deposit split payment, reservation lookup and an admin dashboard.
- Next.js (App Router) · TypeScript · Tailwind CSS · shadcn/ui · Prisma · Naver Maps · Channel Talk. Deployed on Naver Cloud.

Skills.

Backend	PHP (CodeIgniter), MySQL, REST APIs, Python (automation), Node.js, Linux
Frontend	TypeScript, JavaScript, React, Next.js, Tailwind CSS, Framer Motion, responsive UI, accessibility
Mobile	iOS (Swift), Android (Java), WebView hybrid, App Store / Play Store releases
Cloud & Ops	AWS (EC2, RDS, Bedrock, CloudWatch), Sentry, cron/batch jobs, staging and recovery
AI	Claude Code, Claude API, MCP, AWS Bedrock, Cursor, Gemma, agent design with human approval gates
Integrations	Airbnb, Agoda, Booking.com, Tujia, Channel Talk, 5 payment gateways, Google & Naver Ads APIs

Education & Other.

Education	Sangmyung University, Computer Science (2014–2021, did not complete)
Military	Republic of Korea Army, Sergeant, honorably discharged (2014–2016)
Languages	Korean (native) · English (professional reading and writing) · Chinese (conversational)
